To illustrate the kind of questions you can expect, let's analyze a typical problem from the differential equations section:

Question: Solve the differential equation $dy/dx = y / (x + 1)$ with the initial condition $y(0) = 2$.

Approach:

- Recognize that this is a separable differential equation.
- Separate variables: $dy/y = dx / (x + 1)$.
- Integrate both sides:
- $\int (1/y) dy = \int (1/(x+1)) dx$.
- Result: $\ln|y| = \ln|x + 1| + C$.
- Exponentiate to solve for y :
- $|y| = e^{\ln|x+1| + C} = e^{\ln|x+1|} e^C = |x + 1| e^C$.
- Let $K = e^C$, then $y = K (x + 1)$.
- Use the initial condition $y(0) = 2$:
- $2 = K (0 + 1) \Rightarrow K = 2$.
- Final solution: $y = 2(x + 1)$.

This exemplifies the typical problem-solving approach for differential equations: recognizing the method, executing integration, applying initial conditions, and presenting the solution neatly.

Tips for Time Management During the Exam

- Allocate time based on marks:
- Spend more time on questions carrying higher marks.
- Leave difficult questions initially and revisit later if time permits.
- Answer easy questions first to secure quick marks.
