- Web-based versions via CGI or embedded scripts

Creating these games involves managing data structures for cards, implementing game logic, and designing user interfaces that are intuitive and engaging.

Designing Animal Matching Card Games for C: A Step-by-Step Guide

1. Planning Your Game

Before coding, determine:

```
typedef struct {

 int id; // Unique identifier for the card

 char animal_name[50]; // Name of the animal

 char image_path[100]; // Path to the animal image

 int is_matched; // Flag to indicate if the card has been matched

} Card;

...
```

### 3. Shuffling and Arranging Cards

Use a shuffling algorithm like Fisher-Yates to randomize card positions:

```
```c  
  
void shuffleCards(Card cards, int numCards) {  
  
    for (int i = numCards - 1; i > 0; i--) {  
  
        int j = rand() % (i + 1);  
  
        // Swap cards[i] and cards[j]  
  
        Card temp = cards[i];  
  
        cards[i] = cards[j];  
  
        cards[j] = temp;  
  
    }  
  
}  
  
...
```

4. Implementing the Game Logic

- Display the cards face down
- Allow the player to select two cards
- Check for a match
- Mark matched pairs
- Continue until all pairs are found

Developed by a creative team seeking to blend education with entertainment, it's more than just a simple matching game—it's an experience that promotes memory, deduction, and social interaction.

Origin and Concept

The game originated from the idea of incorporating a humorous theme about animals, mischief, and the concept of "pooping," which, while seemingly silly, acts as an engaging hook for young players. The aim is to identify which animal left the "poop" in different locations, using visual clues and memory skills.

The visuals are friendly, humorous, and appealing, making it inviting for children.
