- Behavioral and Situational Questions

Below, we delve into each category, presenting typical questions and comprehensive suggested answers.

Fundamental Accounting Principles

What are the basic accounting principles every accountant should know?

Answer:

The basic accounting principles include:

- Accrual Principle: Revenue and expenses should be recognized when they occur, not necessarily when cash is received or paid.
- Consistency Principle: Consistent application of accounting methods over time ensures comparability.
- Going Concern Principle: Assumption that a business will continue to operate unless there is evidence to the contrary.

Can you explain the accounting equation?

Answer:

Certainly. The accounting equation is the foundation of double-entry bookkeeping and states:

Assets = Liabilities + Shareholders' Equity

This equation reflects that all assets owned by a company are financed either through liabilities (debts owed to outsiders) or through shareholders' equity (owner's investment and retained earnings). It must always stay balanced, serving as the basis for preparing financial statements.

Financial Statements and Reporting

Common methods include:

- Straight-Line Method: Expenses an equal amount each year.

Formula: $(\text{Cost} - \text{Salvage Value}) / \text{Useful Life}$

- Declining Balance Method: Expenses more in early years, decreasing over time, often using a fixed rate multiplied by the book value.
