Question: A survey was conducted on students' preferred modes of transportation. The results are shown in the table below:

| Mode of Transport | Number of Students |

|-----|-----|

| Bus | 120 |

| Car | 80 |

| Bicycle | 50 |

| Walking | 50 |

Question: What percentage of students preferred to travel by bus?

Solution:

Total students = $120 + 80 + 50 + 50 = 300$

Percentage preferring bus = $(120 / 300) \times 100 = 40\%$

Example 2: Financial Calculation

Question: If a student saves R200 each month in a bank account offering 5% annual interest compounded monthly, how much will they have after 1 year?

Solution:

Principal per month = R200

Number of months = 12

Monthly interest rate = $5\% / 12 = 0.004167$

Using the future value of a series formula:

$$FV = P \times [(1 + r)^n - 1] / r$$

Where:

$$P = R200$$

$$r = 0.004167$$

$$n = 12$$

$$FV = 200 \times [(1 + 0.004167)^{12} - 1] / 0.004167$$

$$FV = 200 \times [(1.0512) - 1] / 0.004167$$

$$FV = 200 \times 0.0512 / 0.004167$$

$$FV = 200 \times 12.29 = R2,458$$

So, the student will have approximately R2,458 after one year.

Sample Questions and Model Answers in Photography Assignment 2

Question 1: Explain the significance of the rule of thirds in composition.

Model Answer:

The rule of thirds is a fundamental principle in photographic composition that involves dividing an image into nine equal parts using two equally spaced horizontal lines and two vertical lines. Placing the main subjects along these lines or at their intersections creates a balanced and engaging composition. This technique guides the viewer's eye naturally through the image, making it more aesthetically pleasing. For example, positioning a horizon along the top or bottom third rather than the center avoids static images and adds dynamism. The rule of thirds is widely used by professional photographers to create compelling visual narratives and is a simple yet effective tool for enhancing photographic quality.

Question 2: Describe how different lighting conditions affect photography.

Model Answer:

Lighting plays a crucial role in photography, influencing mood, clarity, and overall image quality. Natural lighting varies throughout the day:

- Golden Hour: Soft, warm light occurring shortly after sunrise or before sunset; ideal for portraits and landscape shots.
- Midday Sun: Harsh light with strong shadows; can cause overexposure and high contrast but useful for high-energy images.
- Overcast Days: Diffused light minimizes shadows, suitable for even-toned images.

Artificial lighting includes:

- Studio Lights: Controlled, consistent light sources for portraits and product photography.
- LED and Flash Lights: Used to fill shadows or add emphasis.

Different lighting conditions affect:

- Color temperature: Warm or cool tones in images.
- Shadow depth: Enhances or diminishes textures.
- Exposure settings: Adjustments in aperture, shutter speed, and ISO are necessary to compensate.

Understanding and manipulating lighting conditions allow photographers to evoke specific emotions and achieve desired effects.
